22 JUL 1963

MEMORANDUM FOR: Deputy Director (Intelligence)

SUBJECT : Proposal for ELINT Reconnaissance of  
PYONGYANG SAM Site

1. The DDI/CGS has reviewed the subject proposal and concurs in its implementation. CGS further suggests that additional aircraft should be flown to disguise the purpose of the RB-47 intercept aircraft and confuse the air defense targeting in the event an attempt is made to down an aircraft in addition to the drone.
2. The validity of the requirement for the information expected to be acquired has been verified by the OSI. The Agency has lost two aircraft to the SA-2 defense system and has yet to obtain data in a kill situation which if acquired would permit development of counter measures devices.
3. Intercepts of radar signals from the PYONGYANG site indicate that it is operational.
